

SMOOTHER RESULTS IN EVERY DOSE.

DOES YOUR ROOT CANAL CONDITIONER DO ALL THIS?

Available in boxes of 35 or 100 single-dose compules.

Effervescent action quickly lifts tissue and debris coronally

Ideal lubricant for hand file and rotary instrumentation

Contains EDTA which removes bacteria along dentinal tubules

Single doses provide convenience with no mess

Gel consistency clings to files better for easier file placement

Get improved results from the root canal conditioner that comes in a convenient, disposable single unit dose. ProLube[®] root canal conditioner from DENTSPLY Tulsa Dental Specialties.

ProLube conditioner lubricates the file for smoother, more consistent cleaning and shaping. ProLube conditioner contains carbamide peroxide, which releases oxygen in the presence of NaOCl. Its effervescent action quickly lifts away pulp tissue, dentinal shavings and debris. ProLube conditioner contains EDTA which effectively removes bacteria and leaves the dentinal tubules and lateral canals ready for obturation.

But ProLube conditioner does more than clean better—it clings better, with a gel consistency for easier file placement.

Best of all, ProLube conditioner's single doses are disposable and easy to use. So you can concentrate on the task at hand without worrying about cross-contamination or cleanup. Simply use once and toss.

Consistent results. Greater convenience. In every single dose.
