#### 4.2 Disinfection of the Impression Material

The impression should be disinfected with a hospital-level tuberculocidal disinfectant according to national and local regulations.

- Iodophors, sodium hypochlorite (0.525%), chlorine dioxide, and dual or synergized quaternary ammoniums are approved disinfectants.
- Thoroughly soak by spraying or immerse the impression in any recommended hospital level disinfectant for the contact time recommended by the disinfectant manufacturer for optimum results.
- Water-based disinfectant solutions are preferred.

#### 4.3 Casting

- The impression should be removed from the disinfectant, rinsed with water, and lightly air dried.
- The impression may be poured in plaster or stone 30 minutes after disinfection or delayed up to fourteen days. For epoxy dies, delay pour 60 minutes.
- Do not store impression in direct sunlight.
- If the impression is to be shipped, use suitable packaging to preclude distortion.
- The material is compatible with a range of dental plasters and die stones. Impressions may be silver or copper-plated.
