THE POWER OF THE PROVISIONAL
The path to restoration success and longevity begins with a strong start. DENTSPLY’s provisional solution provides the right set of products and techniques to help ensure you achieve procedural efficiencies and optimal clinical success, while protecting office profitability.

Provisionals are an important element of crown and bridge restorations. Each successful execution supports your goals of final restoration longevity and patient satisfaction, while ensuring the full procedure remains one of the most profitable for the practice.

SUCCESS STARTS WITH A BETTER PROVISIONAL SOLUTION

**$115**
15-minute recement visit could cost you more than $115 (time & resources)

**$347**
Return visits for refabrication could cost as much as $347 (time & resources)

ACHIEVING GREATER CLINICAL EFFECTIVENESS

BUILD FROM AN ACCURATE MATRIX

75% OF POSSIBLE PROVISIONAL PITFALLS CAN DERIVE FROM THE PRELIMINARY IMPRESSION

From the preliminary impression to the provisional material and temporary cementation, visit one can lay the foundation for overall procedural success, resulting in:

- Improved diagnostic impressions
- Accurate anatomical contours
- Better provisional fit and positioning
- Homogenous mix with no dust or cleanup

CREATE A BETTER PROVISIONAL

80% OF DEFINITIVE CEMENTATION VISITS ARE IMPACTED BY TEMPORARY CEMENT USE

IMPROVES AND IMPROVES CAN COST AN OFFICE AS MUCH AS $300 IN LOST PRODUCTION

To counteract the most common pitfalls like open margins, rough margins, bad contours, or poor occlusal contacts, Algin•X Ultra Alginate Alternative delivers high-dental and dimensional stability to help ensure:

- Accurate anatomical contours
- Better provisional fit and positioning
- Homogenous mix with no dust or cleanup

CEMENT WITH THE END IN MIND

100% OF DEFINITIVE CEMENTATION VISITS ARE IMPACTED BY TEMPORARY CEMENT USE

Set the tone for the rest of the procedure by choosing the right material. Integrity® TempGrip® Cement helps by:

- Simplifying clean-up with no residual cement left behind
- Establishing an ideal environment for resin-based definitive cementation
- Avoiding desiccating the prepared tooth

Winning visit two. The provisional helps ensure patients return for their final crown and bridge seating appointment with optimal dental and tissue conditions for a surprise-free visit. Final fit, positioning, tissue contour, and tissue health are all directly impacted by visit one. Also, post-op sensitivity, patient comfort, masticatory function, and provisional esthetic qualities all play an important role in overall patient satisfaction and assessment of a clinician’s skill.

52% of clinicians want to use their staff more!

Help Your Assistant Help Your Practice. Successfully executing the provisional procedure requires not only the skills of the dentist but also the skills of the assistant in that many dentists wish they could use their assistant more. Undertrained or underutilized auxiliary staff can lead to unnecessary office inefficiencies. Spending time and resources to bolster auxiliary staff knowledge and skills will go a long way in increasing total office production and patient satisfaction.

THE KEY TO A BETTER PROVISIONAL? START WITH A BETTER LINEUP.
