

CBCT to Azento®

- Export protocol for Vatech Green16

This protocol gives a detailed description of the steps to be followed for exporting your images from the Vatech software in DICOM format. The export protocol is usable with the Vatech Green16 Capture software version 1.0.0.3 or higher. This protocol aims at an optimal visualization of your images.

Part 1: Vatech NCSW software

1. Image Acquisition

Capture software: Vatech Capture SW version 1.0.0.3 or newer.

Α	FOV (Diameter x Height)	80 x 50 or larger
В	Vertical Option	Occlusion
С	Horizontal Option	Center
D	Tooth option	N/A
Е	Image Option	High Resolution
F	Voxel Size	Standard (0.20)
G	kVp/mA	Depends on patient gender and age

- 2. Export image from Vatech Capture SW
 - **a.** Capture the image according to the Vatech instructions.
 - **b.** Go to EzDent-i to open the scanned image.

				- 6 X

Panorama				
10 Scanner				
IO Sensor				
IO Camera				
TWAIN				
Auto DSLR		Please wait for c	apturing the image.	
Import		Flease wait for Ca	aptuning the image.	

c. Double-click image in EzDent-i menu, and run the Ez3D-i for viewing the image.

d. CT image will be opened.

e. Select Main Menu 📫 Go to 3rd party SW 📫 Simplant

(this option is available always when Simplant is installed on the computer).

f. You can set the image parameters in Reformatted Volume Export window.

1. Launch from Main menu \implies Export \implies Define volume range.

2. Select ROI (region of interest) in the Acquired Images.

- **3.** Select desired Volume Resolution: <u>0.2</u> recommended.
- 4. In case you choose Compress to .zip file you can create your password (optional)5. Click Save.
- 6. In next dialog window you'll be asked to choose saving location

Part 2: Processing your images

Preparations to order an Azento solution

1. Highlight the DicomRM folder that is created and send to compressed zipped folder.

2. When creating the order on orderdigitalsolutions.com, click 'Browse' and select the DICOMRM.zip folder that was created. Then click 'open' to start the upload.
