

Cercon
Tips for Success
Sintering \& More

Recommended processing plays an essential role in the quality of the restorations. Especially when sintering and firing zirconium oxide (Cercon), undesirable results may occur if these recommendations are not followed.

This can affect translucency, color and strength in particular.
Tips for your success gives you an overview of possible undesirable results and possible reasons for them. This makes it easier for you to analyze if something does not go as you want and expect.

$\rightarrow$ Sintering Temperatures
$\rightarrow$ Contamination by Polymer Material

## $\rightarrow$ Adjustments After Sintering

## The Base: Sintering Programs of Cercon Discs

Programs are valid for all Cercon discs:

| Sintering Program |
| :--- |
| Labside Superspeed Sintering |
| Labside Speed Sintering |
| Conventional Sintering |
| Long Term Sintering |

| Number of Units |
| :---: |
| up to 4 units |
| up to 6 units |
| up to 8 units |
| 9 or more units |

## Duration

$\approx 90$ minutes
$\approx 3$ hours
$\approx 5$ hours
$\approx 9$ hours
$1500^{\circ} \mathrm{C}$

Superspeed
Very fast, if time
counts, with slightly
lower esthetic
outcome

Tip: Choice of sintering programs can slightly affect translucency.

## Sintering Programs Cercon Discs For third-party furnaces - IFU Recommendations

- 4 Cercon sintering programs, including cooling recommendations, are available depending on the program structure of the furnace
- The programming used for sintering furnace should be analogous to the Dentsply Sirona sintering programs
- For additional support, contact your furnace manufacturer

## General Sinter programs Cercon ht ML, Cercon ${ }^{\circ}$ ht, Cercon ${ }^{\circ}$ xt ML, Cercon ${ }^{\text {xt }}$ and Cercon base all shades

Ramp time in minutes to reach Temp 1

|  |  | Superspeed Sinter program for bridge frameworks up to 4 units (Cercon* base, Cercon* ht, Cercon* ht ML) and bridge frameworks up to 3 units (Cercon $x \mathrm{x}$, Cercon ${ }^{\text {xt ML) }}$ | Speed Sinter program for bridge frameworks up to 6 units (Cercon" base, Cercon ${ }^{\text {ht, Cercon }}$ ht ML) and bridge frameworks up to 3 units (Cercon ${ }^{\circ}$ xt, Cercon ${ }^{*}$ xt ML) | Sinter program for bridge frameworks up to 8 units (Cercon base, Cercon ${ }^{\text {® }}$ ht, Cercon ${ }^{\circ}$ ht ML) and bridge frameworks up to 3 units (Cercon ${ }^{\circ}$ xt, Cercon ${ }^{\text {xt ML) }}$ | Sinter program for bridge frameworks for 9 or more units (Cercon base, Cercon ${ }^{\circ}$ ht, Cercon ht ML) |

## Wrong Sintering Temperature: Effects of under or oversintering

Tip: Calibration and/or service of furnace is necessary.
Example: Cercon ht ML A2

Contamination of Sintering Temperature: Effects of contamination
Due to heating elements (MoSi2)

- Yellow discoloration (see image below)

Due to coloring liquids

- Discoloration, opaque result

Tip: Run cleaning cycles* twice or call service of furnace.

Due to sintering trays and/
or beads

- Discoloration, opaque result

Tip: Removal of sintering trays and/or beads and run cleaning cycles.*

[^2]
## Contamination by Polymer Material

Burs were used for polymer material (PMMA, composite, resin) and afterwards for Cercon discs.

Contamination due to polymer material or contaminated sintering beads.

Tip: Use milling and grinding tools exclusively for Cercon.

## Adjustments after Sintering Potential Sources of Fractures

- Massive grinding of the whole restoration
- No water cooling during grinding/cutting
- Additional seperation in the connector areas
- After veneering: Seperation down to the framework
- Sandblast pressure (> 3 bar) is too high
- Usage of abrasive particles for sandblasting

## What happened

The framework was heavily grinded in the area of the connectors, which led to the development of cracks. Due to multiple firings of veneering ceramic and gingiva materials, the cracks grew due to thermal stresses and led to fractures of the restoration.

Tip: Avoid massive grinding of the sintered framework / restoration, especially in the connector area.
